MECKLENBURG NURSERIES, INC.

THRIFT HIGHWAY

CHARLOTTE, : N. C.

RETAIL PRICE LIST

FALL 1932

SPRING 1933

FOREWORD

Our nurseries are located three miles west of Charlotte, on the new Thrift Highway No. 271, where we have fifty acres planted in high-grade ornamental stock, exclusively. Our location, midway between the mountains and the coast, is especially favorable to the production of hardy plants for use in all sections of the country. While there are some varieties grown here that are not hardy in the North, most varieties grown here will thrive there. We recommend the planting of the hardier types of broadleaved evergreens in the lower North, many of which have heretofore been considered strictly southern material. We invite you to write us, or to visit our nurseries, feeling sure that a trip through our plant would be both interesting and profitable.

TERMS are cash with order, or to persons or firms of approved credit we will extend thirty-day terms. Prices are f. o. b. Charlotte, packed for shipment.

GUARANTEE. We will replace once free of charge any plants we sell which fail to live the first season from causes other than neglect or abuse, provided, the original planting was done by us and items are then in stock. Otherwise like credit on other varieties. Stock not planted by us which dies the first season will be resupplied once at one-half list price. All replacements f. o. b. nursery.

MECKLENBURG LANDSCAPE SERVICE

Few things pay such good and continuous dividends of genuine satisfaction and pleasure as well-planted home grounds.

With the great wealth of plant material available today, you can be sure of achieving beautiful and individual effects. The modern way is to plant the whole grounds. The lot is divided into such portions as the front yard, the side yard and the rear yard. Planning is the first step in achieving the completed picture. The realization comes with the actual planting of trees, shrubs and flowers.

Our Landscape Department will gladly assist in working out the whole job to your entire approval. We are well equipped to make the plan, furnish the plants and set them in their proper places on your grounds. The cost? You'll be agreeably surprised!

Phone or write us today—there is no obligation.

MECKLENBURG NURSERIES has been operating in Charlotte for many years, and has followed rigidly its policy of producing strictly high-grade ornamentals exclusively. Here you will find plants in more than 400 varieties, from the smallest sizes to towering specimen evergreens, 15 to 20 feet in height. A veritable storehouse of fascinating plant materials.

CONIFEROUS EVERGREENS

Evergreens have a great advantage over deciduous trees in that they are beautiful both summer and winter and are perfectly hardy. When selecting conifers for a foundation planting, one must keep in mind the smaller and slow growing varieties, while for specimen planting those of taller growing habit may be used. The handsome Indian or Deodara Cedar is of symmetrical outline with beautiful silvery foliage. It is one of the best for specimen planting. We offer a complete assortment of conifers for all purposes.

HARDY FLOWERING SHRUBS

Nature employs shrubbery extensively to fill the vacant places and we do well to follow her example. The evergreen key plants and a free use of flowering shrubs complete the picture. Plant shrubs in masses of a variety rather than too many in a mixture. We grow many new and rare sorts selected for bloom throughout the season.

BROADLEAVED EVERGREENS

The Broadleaved Evergreens hold their foliage throughout the winter. They are easily transplanted, most of them do well in partial shade as well as in sun, and once established will grow practically without care longer than most other types of plants.

There is a wealth of broadleaved material available today and in the South as well as in portions of the North they are being extensively used. Among the most popular are Nandina, Ligustrum lucidum, Abelia, English Laurel, Ilex and Osmanthus.

ABELIA GRANDIFLORA. Glossy Abelia. The most popular Southern shrub. Blooms all summer, pinkish-white.

HARDY HERBACEOUS PERENNIALS

There is a strong appeal in the old-fashioned perennials, and with the many varieties now available, every corner of the grounds can be kept bright with color throughout the season. Gardening has retired to the rear-yard with a great impetus during the last year or two, and we are prepared with nearly all sorts for southern planting. In planting perennials we demand two things—varieties that will brighten the garden and those which can be cut for the house. The sorts listed below do both. Those suitable for the rock garden are marked *.
